# E-TIGO LTD

## DATA RETENTION – QUESTIONS FOR THE APP INSERV TEAM

**Purpose:** To obtain information on the application's current data retention practices and technical capabilities for the preparation of E-TIGO LTD's Privacy Policy in accordance with the Nigeria Data Protection Act 2023 (NDPA).

**Dear Inserv Development Team,**

Kindly provide the applicable data retention periods for the following categories of information collected or processed through the E-TIGO application.

The categories below are provided as samples. Please indicate the actual retention periods supported or currently implemented in the application.

## DATA RETENTION PERIODS

**1. KYC and Identity Verification Records**

How long does the application retain users' identity verification documents and KYC information after account closure?

**Retention Period:** *Not yet auto-deleted for drivers with trips (see Annex, item 1)*

**2. Financial and Transaction Records**

How long are payment histories, transaction records and other financial information retained?

**Retention Period:** *Kept for legal/accounting; no auto-deletion (see Annex, item 2)*

**3. Trip and GPS Records**

How long does the application retain trip histories, GPS locations, routes and other journey-related information?

**Retention Period:** *Trip records kept; live GPS expires in 5 min (see Annex, item 3)*

**4. In-Vehicle CCTV Recordings**

Where CCTV cameras are installed in vehicles, how long will video recordings be stored before deletion?

**Retention Period:** *Not applicable: the app does not record CCTV (see Annex, item 4)*

**5. Audio Recordings**

Where audio recording is legally authorised and implemented, how long will recorded conversations be retained?

**Retention Period:** *Not applicable: the app does not record calls (see Annex, item 5)*

**6. Account Information**

How long will users' personal information remain stored after they deactivate or permanently delete their accounts?

**Retention Period:** *Erased 30 days after the deletion request (see Annex, item 6)*

## TECHNICAL CAPABILITIES

Kindly confirm the following:

**7. Automatic Data Deletion**

Does the application support automatic deletion of personal information once the applicable retention period expires?

☑ Yes ☐ No ☑ Under Development *Yes for accounts and notifications; others under development (Annex, item 7)*

**8. Secure Data Storage**

Are appropriate security measures implemented to protect stored personal information against unauthorised access, disclosure or loss?

☑ Yes ☐ No ☐ Under Development

**9. Access Restrictions**

Does the system restrict access to sensitive personal information based on authorised user roles and permissions?

☑ Yes ☐ No ☐ Under Development

**10. Different Retention Periods**

Can the application implement different retention periods for KYC records, financial transactions, GPS data, CCTV recordings, audio recordings and account information?

☐ Yes ☐ No ☐ Under Development

**11. Data Deletion Requests**

Can users request the deletion of their personal information through the application, and does the system support processing such requests?

☑ Yes ☐ No ☐ Under Development *In-app request, 30-day grace period (see Annex, item 11)*

**12. Data Storage Location**

Where is users' personal information currently stored (cloud provider or server location)?

**E-TiGO LTD**
RC 9886153 | PRIVATE COMPANY LIMITED BY SHARES
**Plot 618, Jahi District, Abuja, FCT, Nigeria**
metuaghandamilanre@g

**Response:** *Cloudinary (files) and our application servers (database); see Annex, item 12*

## ADDITIONAL INFORMATION

Please indicate any other data retention, storage, deletion or security features currently implemented or planned for the E-TIGO application.

**Response:** *See Annex, Additional Information*

**Note:** The information provided will assist E-TIGO LTD's Legal in determining appropriate data retention periods and preparing **the company's Privacy Policy**. The final retention periods will be subject to legal and operational approval.

# Annex: Responses from the Inserv Development Team

Prepared by: Engineering Lead, Inserv · Date: 6 November 2026

These answers describe what the E-TiGO application does today. Where Legal has not yet set a period, we say so. Any period Legal approves can then be built into the application as an automatic deletion rule.

## 1. KYC and identity verification records

Driver identity data (ID number, verification result and driver's licence number) is encrypted in the database. There is currently no automatic deletion of these records after account closure:

- A driver who has never completed a trip is erased completely 30 days after asking to delete their account, and their KYC records are deleted with them.
- For a driver with trips, the name, phone number, email and password are erased, but the KYC and licence records are kept.

**Action for Legal:** set a period (for example, a number of years after account closure). The team will then add automatic deletion.

## 2. Financial and transaction records

Payments, wallet activity and payouts are kept in a double-entry ledger and are not automatically deleted. This is deliberate, because tax and accounting law require these records. When an account is deleted, the person's name and contact details are removed and the financial records are kept without them. Our payment providers (Paystack and Flutterwave) also keep their own copies.

**Action for Legal:** confirm the statutory period.

## 3. Trip and GPS records

- **Trip history and route:** saved with the trip record for fares, receipts, disputes and safety investigations. Not currently auto-deleted.
- **Live driver location:** held in short-term memory only, and expires automatically within 5 minutes once location updates stop. Driver location is collected only while the driver is online or on a trip.

**Action for Legal:** set a period for trip and route data. The team can then add automatic deletion.

## 4. In-vehicle CCTV recordings

Not applicable. The application does not record, receive or store CCTV footage. If a CCTV system is added later, its retention period will be set then.

## 5. Audio recordings

Not applicable to trips. The application does not record calls or conversations. The only audio is evidence (such as a voice note) that a user chooses to upload with a dispute. It is kept in private storage with that dispute and has no separate deletion period yet; one can be added.

## 6. Account information

Users can delete their account in the app. They are signed out on every device immediately, and the account is erased after a **30-day grace period** (the period can be configured). Signing in again during those 30 days cancels the request. After 30 days, an automatic daily process erases:

- sign-in details, saved places, saved cards, social logins, notification settings and the profile photo;
- for an account with no trips: the whole account;
- for an account with trips: the name, phone number, email and password. The trip and payment records the law requires are kept without them.

A deletion request cannot be made during an active trip, while money is owed either way (a wallet balance to refund, unpaid driver earnings or an outstanding balance), or while an E-TiGO car agreement is active, so these can be settled first. In-app notifications are deleted automatically after 90 days.

## 7. Automatic data deletion

**Yes** for deleted accounts (30 days) and in-app notifications (90 days). **Under development** for KYC, financial and trip data: the deletion rules will be added once Legal confirms the periods.

## 8. Secure data storage: Yes

- All traffic between the apps, the Admin Dashboard and our servers is encrypted (HTTPS/TLS and secure WebSockets).
- Sensitive identity records (ID numbers, KYC results, licence numbers) are encrypted in the database (AES-256).
- Passwords and sign-in codes are stored only as one-way hashes.
- Full card numbers and CVVs are never stored. Cards are held by Paystack (PCI-DSS certified).
- Documents and evidence are in private cloud storage, with no public link. Profile photos are the only public images.

## 9. Access restrictions: Yes

Staff accounts are invitation-only and have separate roles: Super Admin, Operations, Safety Operator, Support, Support Lead and Finance. Each role sees only the data it needs. Staff sign in with a password plus a code sent to their email, and important staff actions are recorded in an audit log. Passengers and drivers can see only their own data.

## 10. Different retention periods

Not answered, as instructed by E-TiGO.

## 11. Data deletion requests: Yes

Users can request deletion from inside the application. The request is processed automatically as described in item 6.

## 12. Data storage location

- **Uploaded files** (documents, photos, dispute evidence): Cloudinary private cloud storage.
- **Database:** on E-TiGO's application servers.
- **Production hosting provider and region:** to be confirmed before launch.

## Additional information

- **Implemented:** encryption in transit and at rest for sensitive fields; role-based staff access with two-step sign-in; staff audit log; private file storage; 30-day account deletion; automatic removal of notifications after 90 days; automated security tests on every change.
- **Planned / to be confirmed:** database backup schedule and how long backups are kept; independent penetration test before launch; automatic deletion rules for KYC, financial and trip data once Legal sets the periods.
- **Service providers that process data:** Paystack and Flutterwave (payments), QoreID (driver identity checks), Sendchamp (SMS), Resend (email), Google Firebase (push notifications), Google Maps (maps and addresses), Cloudinary (file storage).
