E-tiGo — EV Charging, Vehicle Maintenance and Repairs: Decisions Report

Prepared by: Engineering Team
Date: 28 October 2026
Status: Implemented (EV charging and maintenance in Phase 2; Operations actions, repair requests and the hire-purchase fee waiver in PR #137). One value is marked **client**: drivers still paying off an E-tiGo car do not pay the EV reservation fee (set on 28 October 2026). Every other value is a default chosen by engineering and **has not been confirmed by the client yet**. Operations can change each one at any time, without a release, from the admin settings (`PUT /api/v1/admin/settings/ev-charging` and `PUT /api/v1/admin/settings/vehicle-maintenance`). The apps read the current values from `GET /api/v1/config`, so a change shows in the app copy straight away.

Executive Summary

Three driver features need the client's confirmation of a few numbers and rules:

- **EV charging.** Drivers of electric and plug-in hybrid cars reserve a stall at an E-tiGo station, either straight away or by sending a charging request that Operations confirm. A ₦500 fee holds the stall for the driver.
- **Vehicle maintenance.** Each car has a checklist of service items and legal papers. Drivers get reminders, and a car whose papers have expired is kept off the road after a grace period.
- **Repair and service requests.** Drivers ask E-tiGo for a repair or a service visit from the app. Operations book the workshop, complete the request with a report, or cancel it.

Section 4 lists the decisions we need, each with our recommendation. If the recommendation is accepted, nothing needs to change: it is already the default.

Table of Contents

1. EV Charging
2. Vehicle Maintenance
3. Repair and Service Requests
4. Decisions Needed From the Client

---

1. EV Charging

Decision	E-tiGo default	Why
Reservation fee	**₦500**, taken from the driver's earnings when a stall is actually held for them	Stops drivers holding stalls they don't use. Nothing is charged while a request waits for review or while the driver waits in the queue
Who doesn't pay the fee	Drivers **still paying off an E-tiGo car** on a hire-purchase agreement (**client**), plus Platinum and Diamond tiers	Set by the client: drivers on the ₦40,000 daily remittance shouldn't pay extra to charge the car they are buying. Drivers who have paid off their car, and drivers with their own car, pay the fee

Decision	E-tiGo default	Why
A **paused** hire-purchase agreement	Still counts as paying, so no fee	Operations pause an agreement for a short break (illness, repairs); the driver is still buying the car
How long a stall is held	**30 minutes** for the driver to arrive and start charging; after that the stall is released and the fee kept	Long enough to cross most of Lagos at off-peak times; short enough that a no-show doesn't block a stall for long
Free cancellation	Cancelling within **2 minutes** of the stall being held refunds the fee	Covers a mistaken tap without letting drivers hold stalls for free
Queue	At most **10** drivers per station; a full station takes a queue only when a stall is due to free within **15 minutes**, otherwise the driver is told to try again in **15 minutes**	Avoids queues that move too slowly to be useful
Open reservations per driver	**1** at a time	One car, one charge
Operations cancel a reservation	Allowed at any stage, with a reason the driver sees. **Refunding the fee is Operations' choice** (off by default)	Lets Operations refund when E-tiGo is at fault (e.g. a broken charger) and keep the fee when the driver is (e.g. a no-show)
Operations end a session the driver didn't finish	Allowed; **the fee is kept** unless Operations tick "refund"	The driver used the stall; a refund stays available for a fault on E-tiGo's side
How far ahead Operations can confirm a request	Up to **7 days** ahead	Matches how far drivers plan their week

2. Vehicle Maintenance

Decision	E-tiGo default	Why
Routine service	Every **5,000 km or 3 months**, whichever comes first	Common interval for cars driven all day in city traffic
Tyres and brakes check	Every **6 months**	Ride-hailing cars wear tyres and brakes fast
Battery health check (electric and plug-in cars)	Every **12 months**	Annual check is typical for EV batteries
Reminder lead	**14 days** (or **500 km**) before an item is due	Time to book a workshop without rushing
Expired insurance, roadworthiness or vehicle licence	**7 days** of grace (warnings only), then the driver **can't go online** until a renewed paper is approved	Driving with expired legal papers is a legal and insurance risk; the grace period covers renewals in progress. A driver on a trip always finishes it
Overdue service	**Warning only**, never blocks	Service timing is a recommendation, not a legal requirement

3. Repair and Service Requests

Decision	E-tiGo default	Why
Stages	**New → Booked → Completed**, or **Cancelled**	Matches how a workshop visit happens
Rebooking	Operations can move a booked visit while it hasn't happened	Workshops reschedule often

Decision	E-tiGo default	Why
Who can cancel	The driver (any time before completion, reason optional) and Operations (reason required, shown to the driver)	The driver may get the car fixed elsewhere; Operations may find the work is under warranty
Driver notifications	When the visit is booked, completed or cancelled	The three moments the driver needs to act on
Reports	Operations can attach a workshop report or quote; the driver can't delete files E-tiGo added	Keeps a record of the work on the car

4. Decisions Needed From the Client

Each line shows our recommendation (the current default). Reply "agree" or give the value you want.

#	Question	Recommendation
EV-1	What should the EV reservation fee be?	**₦500**
EV-2	Does a driver whose hire-purchase agreement is **paused** still charge for free?	**Yes**: they are still buying the car
EV-3	How long should a reserved stall wait for the driver?	**30 minutes**
EV-4	How long after reserving can a driver cancel and get the fee back?	**2 minutes**
EV-5	When Operations cancel a reservation, should the fee be refunded automatically?	**No**: Operations decide each time (refund when it was E-tiGo's fault)
EV-6	When Operations end a session the driver didn't finish, is the fee kept?	**Yes**, unless Operations choose to refund
EV-7	Queue size per station, and the "try again" wait	**10 drivers**, **15 minutes**
VM-1	Service intervals: routine service, tyres and brakes, battery health	**5,000 km / 3 months**, **6 months**, **12 months**
VM-2	How early should drivers be reminded?	**14 days** (or 500 km) before
VM-3	How long can a driver keep driving after a legal paper expires?	**7 days**, then blocked until a renewal is approved
RP-1	Can a booked workshop visit be moved?	**Yes**, until the visit happens

5. Settings Reference

Operations can change these at any time. Changes apply to reservations made or confirmed afterwards; a reservation keeps the fee it was given.

EV charging (`/admin/settings/ev-charging`):

Setting	Default	Range
`reservation_fee`	500 (naira)	0–100,000
`reservation_expiry_minutes`	30	5–240
`free_cancellation_minutes`	2	0–60
`max_queue_size`	10	0–100
`imminent_departure_minutes`	15	0–240
`retry_delay_minutes`	15	1–240

Setting	Default	Range
`max_active_reservations_per_driver`	1	1–5
`hire_purchase_fee_waiver`	on	on / off
`waive_fee_while_agreement_paused`	on	on / off

Vehicle maintenance (`/admin/settings/vehicle-maintenance`):

Setting	Default	Range
`intervals`	service 5,000 km / 3 months; tyres and brakes 6 months; battery health 12 months	500–100,000 km; 1–60 months
`fuel_type_intervals`	none	per fuel type overrides
`due_soon_days` / `due_soon_km`	14 / 500	0–90 / 0–5,000
`legal_grace_days`	7	0–60
`block_on_expired_papers`	on	on / off
`enabled`	on	on / off
